

We travel all summer in our motor home. We do enjoy our XM radio so much I can't imagine being without it. We can not depend upon getting local radio or TV info on weather when we need it. And as we travel across this big country, we often need it. Right now we need to know when there are tornado and severe thunderstorm warnings. Likewise, we need to know when these storms have caused flooding so we won't get into problem areas. I can easily imagine that truck drivers depend upon XM Instant Traffic & Weather even more than we do. Please reject the NAB's petition 04-160 and let us enjoy the advantages of our satellite radio.
